MODELS: Direct Injection

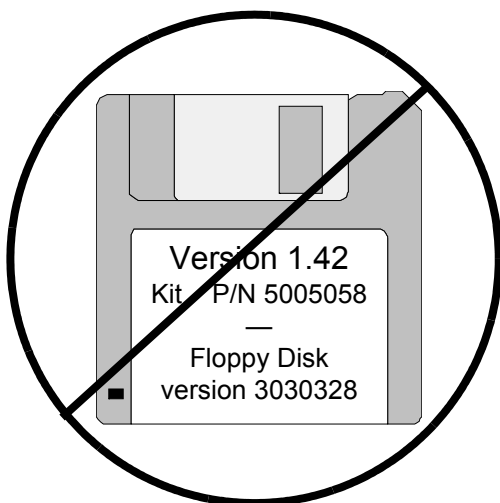

SUBJECT: Diagnostic software EMMDIAG
version 1.42 for PCs

PROBLEM

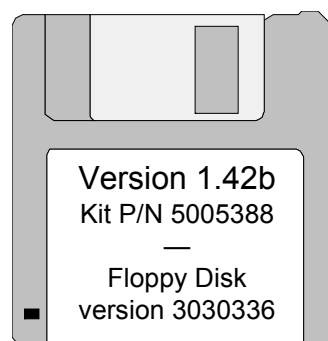

Certain functions of EMMDIAG version 1.42 for PCs are ineffective and incomplete. Continued use may result in erroneous information and improper set-up operations. Discontinue use of version 1.42 and upgrade to version 1.42b.

SOLUTION

- Destroy all disks containing the previous version EMMDIAG 1.42 (Kit P/N 5005058 or Floppy Disk version 3030328). This is critical to ensure that only the latest software version is installed on each of the diagnostic computers that your technicians access. This ensures diagnostic consistency.
- Download the new version EMMDIAG 1.42b from *DealerPort* or order it using Kit P/N 5005388.
- Continue to follow the Users Guide for *Ficht*® Diagnostic Software Version 1.42 (P/N 350281).
