Subject: 18-7914 Oil Filter Service Bulletin

This bulletin serves to correct application information for the 18-7914 oil filter in the 2010 Sierra full line catalog. In some instances in the catalog, the model year reference states a starting model year and then uses the term “& UP” showing that the filter is still used on current model year engines. At the time the filter was introduced by Sierra, the catalog model year information was correct and the term “& UP” was correct. However, in 2007 Mercury introduced a new oil filter for 75/90/115 hp engines which is configured differently than the 18-7914 and will not allow the filter to fit properly.

Sierra currently does not offer a replacement filter for Mercury part number 35-877761K01 and 35-877761Q01. A direct replacement for this new application will be coming in the future. The table below will clarify where the 18-7914 oil filter can be used and future editions of the Sierra catalog will reflect the updated information.

(18-7914) Oil filter replaces Mercury 35-822626K04 and 35-822626Q05

Horsepower	Type	Model Year
25 hp.	Carbureted	Model Year 2006 and earlier
30 hp.	3 Cylinder	Model Year 2005 and earlier
40-60 hp.	All	Model Year 1998 and newer
75-115 hp.	All	Serial Number 1B366822 and earlier

Please note these changes in your 2010 Sierra catalog on pages 108 and 327. If you have further questions concerning this bulletin contact Sierra Technical Service at 217-324-9428.
