

Protect Your Tilt & Trim System While Trailing.

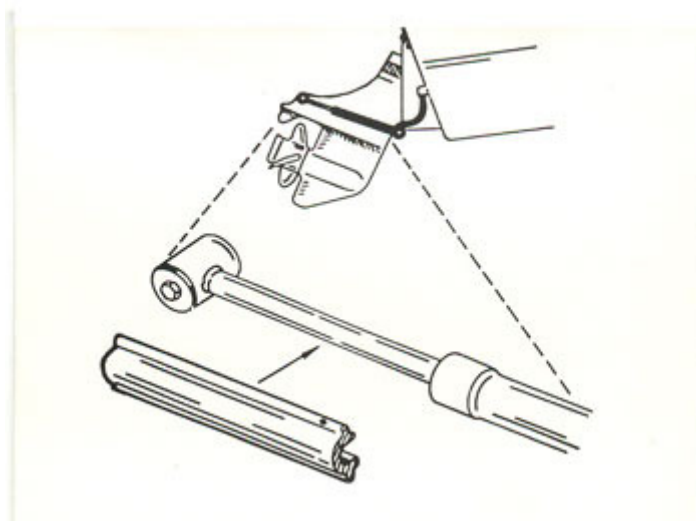

Stern Drive Trailing Clips are designed to protect your tilt and trim system when trailering from:

- ★ Potentially damaging surges resulting from hitting bumps while trailering.
- ★ Long term stress on internal seals, o-rings and valves.

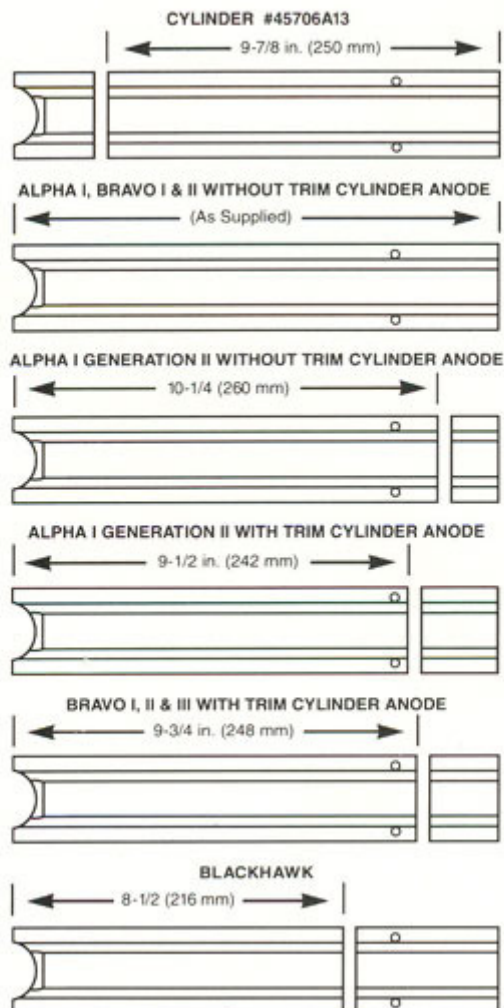

NOTE: Holes in trailing clips are provided so that a cord may be attached for easy retrieval from in the boat with a boat hook.

INSTRUCTIONS

1. Trim stern drive unit to the highest trailering position.
2. Snap one Trailing Clip onto each trim ram.
3. Lower stern drive unit until weight and pressure is off the hydraulic system.

TRIMMING INSTRUCTIONS

Our heritage in the manufacture of quality engine parts dates to 1924. Today, our products are among the finest available in the Marine Industry – manufactured to our own exacting specifications and backed with a warranty that is truly the best in the industry.
